## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 19 November 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Claim Objections***

Claims 5-10, 13-26, 29, 30, and 33 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only and cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 5-10, 13-26, 29, 30, and 33 have not been further treated on the merits.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 11, 12, 31, and 32 are rejected under 35 U.S.C. 102(e) as being anticipated by Dickman (U.S. Patent No. 7066960).

Dickman discloses an intervertebral disc prosthesis 100. Disc prosthesis 100 is substantially the same as disc 50 (Column 12, Lines 15-20) as stated in the disclosure. Disc prosthesis has a flexible section 52 and a less flexible portions 103, 104. The less flexible portions 103, 104 are endplates that are provided on the bottom and top side of

the flexible portion 52 as well as an inner side. The prosthesis is also fiber reinforced with a sheath 51. The fiber material has a low elasticity modulus (Column 8, Lines 1-6) and is considered capable of absorbing hydrogel monomers.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 27 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dickman (U.S. Patent No. 7066960) in view of Bao et al. (U.S. Patent No. 5047055).

Dickman discloses the claimed invention except for the hydrogel being formed by cutting slices from a hydrogel bar. Bao et al. teaches forming a hydrogel implant by cutting the polymer from a rod which is larger than the nucleus. It would have been obvious to one skilled in the art at the time the invention was made to construct the device of Dickman by cutting slices from a preformed hydrogel bar in view of Bao et al. Using the known technique as taught by Bao et al. to form a hydrogel implant would have been obvious to one skilled in the art.
